

Thank you from RAMPF Molds

Dear Paul,

Many of you were at the CONEXPO-CONAGG show in Las Vegas late in March, official attendance numbers are over 120,000 from 150 countries. We had a very good and productive time at the show. We were glad to see so many you there. Below are a few of Rampf's highlights for you to consider.

[RAMPF Flexway®](#)

We are pleased to confirm the high interest of our North American customers in this new technology developed by RAMPF. As a result, the first sales of FlexWay have been booked during the show.

Employing 'FlexWay®' guarantees a longer mold life due to reduced wear. 'FlexWay®' also ensures greater productivity with fewer rejects and a noticeably enhanced surface quality of the pavers. Even the resistance to frost and de-icing salt has been distinctly improved and is now of a greater advantage. There are virtually no extra handling costs involved using 'FlexWay®'.

RAMPF Design Center

You have come to rely on RAMPF to provide you accurate product and layout drawings. We thought it was time to put these services together with our reverse engineering services and call this new group "Rampf Design Center". Rampf-Germany has a similar group and has been warmly received in Germany. Talk with you sales rep. to see what we can do for you.

The show marked the unveiling of our patented process to add textures to the sides of retaining wall or building blocks. RAMPF has developed a process never seen before in a mold to apply variable textures on the side of the stone! As testing continues, we will keep you abreast of our progress in perfecting this exciting technology.

RAMPF's booth was busy during and after the show. We'd like to thank all who stopped by to see what's new with RAMPF for your time and companionship.

We look forward to a productive season together,

Sincerely,

Your **RAMPF Team**
